Notes

1. **Trading Volume, Value and Frequency:** Figures of trading volume, value and Frequency are calculated once, except on the JSX' members trading data. Trading Frequency refers to number of transaction.
2. **Number of shares (number of issued shares):** This figures is number of listed shares after adjustment when bonus and rights issues, share splits and consolidations are made.
3. **Number of listed shares:** This figures refers to the total number of shares that is already listed and can be traded at the exchange.
4. **Market Capitalization:** This figures indicates the aggregate number of shares multiplied by regular market closing price.
5. **Foreign Ownership:** In September 1997, the foreign ownership limitation was abolished except for banks (49% of total listed shares). In May 1999, the maximum number of listed shares and foreign ownership on banks company was set to 99%, based on Government regulation dated May 7th, 1999. IDX calculate this figure by adding net buying/selling by foreign investor for each stock to the previous figure.

6. **IDX Composite Index** =
$$\frac{\sum (\text{Regular Closing Price} * \text{Number of Shares})}{\text{Base Value}} \times 100$$

$$\text{Base Value} = \sum (\text{Base Price} * \text{Number of Shares})$$

7. **Individual Index** =
$$\frac{\text{Regular Closing Price}}{\text{Base Price}} \times 100$$

8. To calculate the IDX Composite Index and Stock Individual Index, Base Price and Base Value are adjusted when bonus and rights issues, share splits and consolidations are made. Base price for new listed companies is IPO price.

9. To calculate Financial Ratio, the latest financial reports are used.

- **Earning Per Share (EPS):** The figure of EPS is derived by dividing the Profit after Taxation by number of issued shares. We annualized the EPS when interim reports are used (see the *Financial statement dates and Financial Year Ends*).

- **Price Earnings Ratio (PER)** =
$$\frac{\text{Regular Closing Price}}{\text{EPS}}$$

- **Book Value per Share (BV):** The figure of BV is derived by dividing the Total Shareholders' Equity by number of issued shares.

- **Price to Book Value (PBV)** =
$$\frac{\text{Regular Closing Price}}{\text{BV}}$$

- **Return On Asset (ROA)** =
$$\frac{\text{Net Income}}{\text{Total Assets}} \times 100$$

- **Return On Equity (ROE)** =
$$\frac{\text{Net Income}}{\text{Equity}} \times 100$$

- **Net Profit Margin (NPM)** =
$$\frac{\text{Net Income}}{\text{Total Sales}} \times 100$$

- **Operating Profit Margin (OPM)** =
$$\frac{\text{Operating Income}}{\text{Total Sales}} \times 100$$
